TOXICOLOGICAL INFORMATION

TOXICOLOGY INFORMATION:

No toxicity data is available for this product, however toxicity information for constituent ingredients are stated below.

This product contains a proportion of respirable free crystalline silica in the quartz component. Crystalline Silica is classified as a Class 1 Human Carcinogen according to IARC (International Agency for Research on Cancer), however research on this is inconclusive and the ASCC/NOHSC has yet to classify crystalline silica as a human carcinogen. Current research indicates no excess risk of lung cancer or other cancers from using these products. Repeated exposure to respirable crystalline silica dust may lead to silicosis, or other serious delayed lung injury. The onset of silicosis is usually slow and lung damage may occur even when no symptoms or signs of ill-health have occurred. Silicosis can develop to a more serious degree even after exposure has ceased, and may also lead to other diseases including heart disease and scleroderma.

Inhalation of dust, including crystalline silica dust, is considered by medical authorities to increase the risk of lung disease due to tobacco smoking.

HEALTH EFFECTS FROM THE LIKELY ROUTES OF EXPOSURE:

INHALATION:

The dust is highly irritating to the upper respiratory tract and lungs, and may cause coughing and sneezing.

Persons with pre-existing respiratory conditions may incur further disability if excessive concentrations of material are inhaled. Overexposure may cause coughing, wheezing and irritation of nasal passages.

INGESTION:

Highly irritating and mildly corrosive if swallowed. May result in nausea, abdominal irritation, pain and vomiting. Ingestion is not expected to occur in normal industrial use.

SKIN:

Is irritating and may cause drying of the skin. May lead to dermatitis and in some cases, sensitisation. The material may accentuate pre-existing skin conditions.

EYES:

The dust is highly irritating and abrasive to the eyes and is capable of causing pain and severe conjunctivitis.

Corneal injury may develop, with possible permanent impairment of vision if not promptly and properly treated.
